Capability Statement

As a wholly Australian Owned Company, Pacific Solar provides our customers with the highest quality products and services in engineering, consultation, design, installation and operation of Renewable Energy Solutions for Industrial, Commercial & Government sectors.

Compliance with Australian regulations and international standards is paramount whilst also adhering to the strictest policies when dealing with health, safety, quality and the environment to ensure Pacific Solar delivers a solar solution that stands the rigors of time.

Our experience as a market leader in integrated systems and complex project delivery makes Pacific Solar your perfect partner in Renewable Energy systems innovation.

Pacific Solar is a proud partner of the LG Dealer Network and was awarded the **Commercial Dealer of the Year 2019-20**. We are also one of only 12 Platinum Partners across the 80 strong LG dealer network.

Please review our corporate video here: [Commercial Solar Case Study](#)

System design & engineering is prepared utilising the following expertise:

- **Pacific Solar** – experience in solar design & installation since 2007.
- 25 years' experience of electrical contracting and proven project management expertise.
- Pacific Solar has Designed, certified & delivered 500+ commercial/Industrial/residential solar projects across Australia from small complex installations to large distribution facilities including a 772kW system for an International printing Plant.
- Austin is recognised as an industry leading expert by the Clean Energy Regulator (CER) as a Certified Inspector for the Government inspections program since 2013.
- Our expert team provides advisory services to deliver your project successfully including engineering, clean energy advice, innovative technical design & delivery.
- Detailed financial & Environmental modelling data can assist your business in presenting your *Environmental & Sustainability Credentials* to your discerning customers.
- Implementation of documented Quality Controls to continually improve the effectiveness of project delivery in accordance with regulatory compliance & design specifications.

We look forward to working with you to meet your renewable energy expectations.

Sincerely,

Austin Vaughan

Director

Our Team & Suppliers

Our expert installation teams are carefully selected in every state of Australia to deliver seamless turn-key solutions for our clients.

The Contractor's selection criteria are across multiple facets of commercial electrical works including the capability to deliver projects within timelines, quality of recent projects, safety record & compliance with Australian Standards.

We are certified to source solar equipment directly via our range of international supplier agreements. An important aspect of equipment procurement is based upon Manufacturer Warranties that are secured with local Australian based offices.

Pacific Solar Design & Engineering:

- Austin established Pacific Solar following 15 years' experience Owning & Managing a commercial Industrial electrical contracting business that completed D&C projects up to \$5M
- Since 2007 Pacific Solar saw the opportunity to make an economic & environmental difference to direct the company focus into Renewable Energy Solutions.
- Key areas of expertise are Innovative Renewable Energy Engineering & Design, project management, Site safety compliance, guaranteed project delivery on time & on budget.
- Our expert team delivers highest quality & cost competitive Renewable Energy solutions to maximise Customer Expectations for system performance & reliability.
